

# Astrolearn Astrological Source Texts on DVD-Rom

Astrolearn, the trading name of Philip Graves, an astrological researcher based in Sweden, now offers the following four compilations of self-scanned astrological source texts on DVD-Rom in searchable Adobe PDF format:

- 1. From Lilly to Partridge: English Renaissance Astrology Texts, 1598-1723** - page 2
- 2. From Sibly to Simmonite: Source texts of the 19th century English astrological revival, 1784-1854** - page 7
- 3. From Cooke to Pearce: English and American Sources on Astrology, 1854-1894** - page 14
- 4. Godfather of Modernity: the Alan Leo Legacy Volume One - Early Astrological Journals, 1890-1912** - p. 19

All four DVDs are packed to the brim with high-quality full-colour scans newly taken by Graves himself since August 2013 from the original antiquarian printings in his personal possession. Thus, these scans offer end-users an authentic historical experience as close to the original source as it is possible to get without holding it, and are not available online or from any other provider. In total, each DVD contains at least 10,000 photographic page impressions (including covers).

Graves has been collecting the source material steadily for over ten years, informed by an acquired wealth of specialised knowledge of the early modern history of western astrology, and driven by a passion to preserve and disseminate to today's historians and astrologers its literary legacy.

The scans on these DVDs are not to be mistaken for the low-quality monochrome scans produced by such providers as Early English Books Online and Google Books. Full-colour scans do not suffer from problems such as coarsened or broken-up and illegible text. These scans have been taken at 300 dpi on a dedicated Plustek book scanner, and processed using the highest quality settings available (i.e. lossless) in Adobe Acrobat.

Moreover, Graves has taken particular care to ensure that the printed content of every page and every fold-out illustration (where present) has been fully captured, and has gone through each file thoroughly page by page to optimise the cropping of each page post-scan.<sup>1</sup> The result is astrological text scans of a superior quality to any others available today.

OCR text produced automatically by Adobe Acrobat at the time of scanning allows users to search the contents of each file for words and terms of interest, a very useful feature for researchers.<sup>2</sup>

All four titles are presently individually produced on demand on printable Verbatim Archival Gold DVD-R media, which are a high-end DVD-recordable storage media product rated for a life of 100 years by the manufacturer. Each DVD is then inkjet-printed in colour with a custom surface design, and finally packaged in convenient clear CD-style jewel cases lined with front inserts and tray cards that are also inkjet-printed with different custom colour designs.

The recommended retail price for each DVD is GBP £59. Discounts may be available in special circumstances.

<sup>1</sup> It has become apparent that one page of C. Heydon Jr.'s 'The New Astrology' is still uncropped; but the content is all there.

<sup>2</sup> On the earliest texts, printed in old-fashioned fonts, OCR is somewhat unreliable, but it is as good as can be achieved with Adobe recognition technology.

This DVD is the earliest in the series tracking the development of astrological texts in the English language, and is the direct chronological predecessor to 'From Sibly to Simmonite'. It focuses chiefly on the major text-books on astrology published in English in the period from 1598 to 1723 inclusive. The gap between the closing date for this DVD and the opening date for 'From Sibly to Simmonite' is the result of astrological publishing, aside from almanacs, having entered a period of dormancy between the mid-1720s and early 1780s.

Although the earliest text is not by Lilly and the last is not by Partridge, our astrological community peer consultation supported the centering of the title around these two most famous of representatives of the flowering and last stand of the English-language Renaissance astrological text publishing movement.

A full bibliographical checklist of the works included on the DVD, in chronological order, follows. This order is reflected in the numerical order given to the file names. Numbered references to 'Gardner' refer to the identification of the work in question in F. Leigh Gardner's 1911 classic bibliography of astrology 'A Catalogue Raisonné of Works on the Occult Sciences Vol. II: Astrological Books', which was especially strong on English-language titles and remains a useful point of reference to the more important portion of astrological books published before 1910, though in terms of comprehensiveness, especially in connection with Latin and foreign-language European works, it has been succeeded by Leandro Cantamessa's recent 'Astrologia Ins and Outs', published exactly a century later in 2011.

<sup>3</sup> The source copy used for Astrolearn's reproduction of this text lacks the folding table of 'planetary howers' towards the end of G. C. book, in common with about 50% of others observed on the used book marketplace these past ten years. A pre-existing monochrome scan of the same book for Early English Books Online contains most but not all of the missing table: the top row and a

2. Lilly, William 'Christian Astrology Modestly Treated of in three Books. The first containing the use of an Ephemeris, the erecting of a Scheme of Heaven; nature of the twelve Signs of the Zodiack, of the Planets; with a most easie Introduction to the whole Art of Astrology. The second, by a most Methodicall way, Instructeth the Student how to Judge or Resolve all manner of Questions contingent unto Man, viz. of Health, Sicknesse, Riches, Marriage, Preferment, Journies, &c. Severall Questions inserted and Judged. The third, contains an exact Method, whereby to Judge upon Nativities; severall ways how to rectifie them; How to judge the generall fate of the Native by the twelve Houses of Heaven, according to the naturall influence of the Stars; How his particular and Annuall Accidents, by the Art of Direction, and its exact measure of Time by Profecions, Revolutions, Transits, a Nativity Judged by the Method preceding' Printed for Tho. Budenell for John Partridge and Humph. Blunden, in Blackfriars at the Gate going into Carter-lane, and in Corhil, 1647. Gardner 680

3. Culpeper, Nicholas 'Semeiotica Uranica, or an Astrological Judgment of Diseases from the Decumbiture of the Sick; 1. From Aven Ezra by way of Introduction. 2. From Noel Duret by way of Direction. Wherein is layd down, The way and manner of finding out the Cause, Change and End of a Disease; Also whether the Sick be likely to live or dye, and the Time when Recovery or Death is to be Expected; To which is added The Signs of Life or Death by the Body of the Sick Party according to the judgment of Hippocrates' Printed for Nathaniel Brookes at the golden Angel on Cornhill, near the Exchange, 1651. half of data is missing, as are the headings, and a separate key to the planetary rulers of each hour of each day of the week. To further Astrolearn's reproduction of the text, the missing table has been retyped from the data presented in the incomplete E.E.B.O. scan, and then completed by rational inference with the missing rows of data at the top, as well as logical column headings for the hours. [NB: The original printed table features a glaring ten-day disparity in the correspondences drawn between calendar date and solar degree; and several faulty figures were spotted in the original printed table. These errors are plain to see and have not been corrected, instead being carried across unaltered for the historical record.] But without knowing the format in which the separate key was presented, it did not seem appropriate to guess and attempt to reconstruct this too. We would refer readers to the equivalent instructions for calculating the planetary hours in the scan of Lilly's 'Christian Astrology'.

<sup>4</sup> Astrolearn's antiquarian source copy also lacks the preface to the G.C. book entitled 'To the courteous Reader'; and the illustration 'On the Anatomie of Man's Body' on the reverse of that sheet. The missing illustration is ostensibly of no astrological significance, and was impossible to reproduce without access to an original source copy containing it. We have, however, reproduced in hand-typed text the address to the reader. Most of it was sourced in the incomplete scan of the same page included in the existingly published Early English Books Online scan edition. The final few lines of this page were unfortunately (once again) missing from the E.E.B.O. scan, but have graciously been provided by a British antiquarian book-dealer by transcription on request from their original copy.

<sup>5</sup> Astrolearn's antiquarian source copy lacks the occasionally-present frontispiece portrait of Ramesey, which has noticeably also been absent from at least 80% of copies of this book to have appeared for sale these past ten years, strongly suggesting that it was not issued in the first place in most copies.

<sup>6</sup> Astrolearn's antiquarian original lacks the title page and some prefatory pages. It could be the 1658 or 1671 edition, the library records for both of which match its features. It was deemed worth including despite the missing title page and prefatory pages because the main content is significantly extended with new material from that of the first edition, aside from the added short treatise 'Urinalia' that was bound in with the editions from 1658 and onwards.

<sup>7</sup> Some original copies of this book are thought to contain a portrait, lacking from Astrolearn's source, but it does not seem to be found commonly.

<sup>8</sup> Our copy lacks the portrait leaf, but includes the sometimes-missing fold-out table of fixed stars.

<sup>9</sup> The two leaves comprising pp. 277-280 were lacking in original print in our copy, but their text content had been rendered as typescript and bound in by an early owner. Thus, the reproduction of the text is complete.

How (by God's Blessing) they may escape divers Dangers which commonly happen in the Ocean. Unto which is added a Diary of the Weather for XXI Years together, Exactly observed in London, with Sundry Observations thereon' [Second Edition] - Printed for George Sawbridge, at the Three Golden Flower-de-luces in Little Britain, London, 1710. 27. Ball, Richard 'Astrology Improv'd' A. Bettesworth, 1723<sup>13</sup>. Gardner 89

---

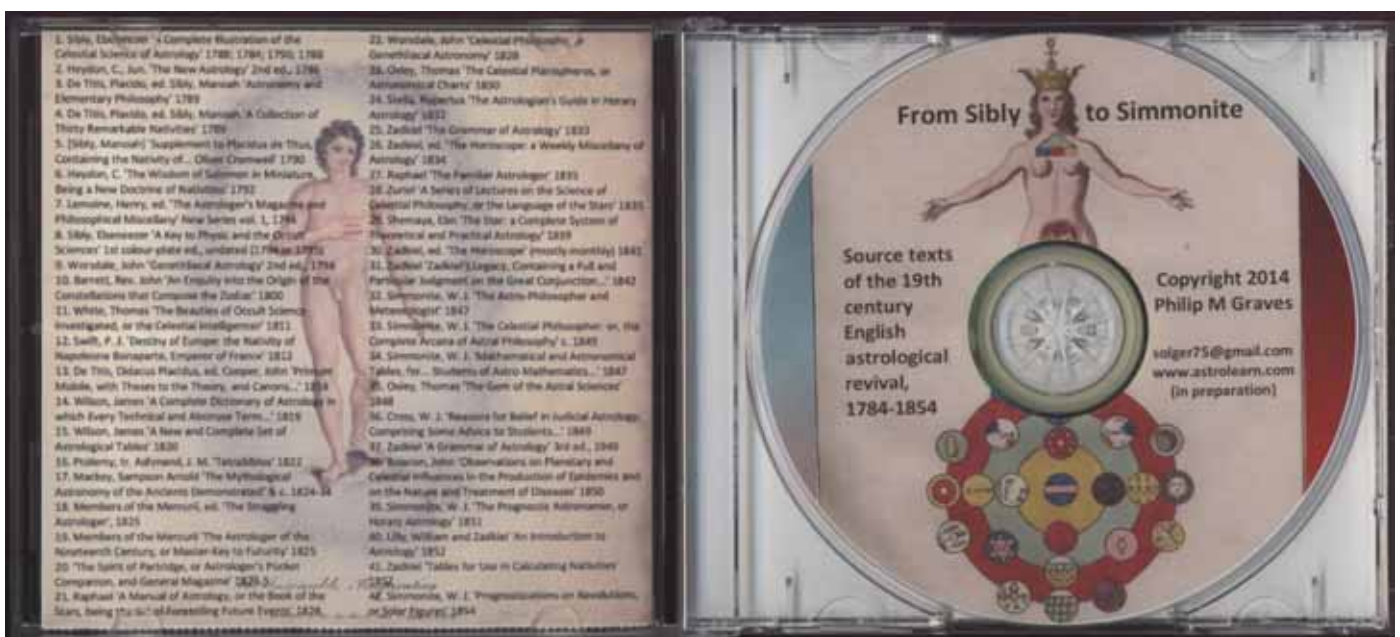

<sup>10</sup> This was the second complete edition following the first attributed jointly to Richard Kirby and John Bishop; yet all Kirby's content is believed to have been retained from the first: he was simply (and ostensibly unjustly) written out of the credits when the book was reissued. Some damage was noted on our original to the leaf comprising A Table of Twilight for the Latitude of 50 and 51 Degrees, fortunately not a significant page. Gardner does not list the present edition, but notes another of the previous year, 1688, which was substantially truncated from the original.

<sup>11</sup> Library records record a 1st edition of 1657, a stated 5th edition undated but believed approx. 1665, a 6th edition of 1670; a 7th edition of 1694; and this, the stated 10th edition of 1704, which is the only one to have been heavily expanded into a lengthy book by George Parker. A copy of a stated 9th edition of 1696, long unsold on the used book market at the time of writing, is said to run to just 90 pages. It is not clear from the lack of library or online sale records whether 2nd, 3rd, 4th and 8th editions ever existed in print, but until and unless firm evidence emerges, the suspicion will remain that the edition count was inflated. For now we can say with certainty only that there were six editions, of which five containing only Eland's work, and the last that of both Eland and Parker.

<sup>12</sup> Our original of this, the 2nd edition of Lilly's autobiography after the first of 1715, was slightly damaged by an early owner's small burn hole through one leaf, with loss of several words of text on pp. 27 and 28. The affected sections have been retyped from a scan copy of the 1822 edition, since the text is unaltered from that of the edition of 1721 in this section, although it has been stylistically reformatted and reset. We have included the retyped lines in the original format of the 1721 edition on a leaf inserted between these pages in our reproduction, so the text as presented is complete. The 1721 edition, unlike that of 1715, was bound in with a reprint of Lilly's 'Several Observations on the Life and Death of King Charles', first published under a fuller title in 1651 according to Gardner. This is included in our scan.

<sup>13</sup> In common with Eland's Tutor to Astrology (see above), this was an early 18th century reworking and major expansion by George Parker of a relatively short 17th century astrological text. The original work in this case was Ball's much shorter 'Astrolo-Physical Compendium; or a Brief Introduction to Astrology' of 1697, which had half the page count.

## 2. From Sibly to Simmonite: Source texts of the 19th century English astrological revival, 1784-1854

This DVD focuses on the texts and journals of the revival in astrological publishing in the 19th century after a period of general neglect and decline in the 18th. This revival was led from England in the 1780s, and all but one of the texts on this DVD are British in origin (the exception being the work of Bowron, which was published in the United States of America). The texts on this DVD span the 70-year period from 1784 to 1854 inclusive, and include nearly all the important English-language astrological sources from that period, with the exception of almanacs and a small number of rare journals and books that have proved altogether elusive during the period of Graves' collecting.<sup>14</sup>

A full bibliographical checklist of the works included on the DVD, in chronological order, follows. This order is reflected in the numerical order given to the file names. Numbered references to 'Gardner' as with the first DVD above before.

### 3. From Cooke to Pearce: English and American Sources on Astrology, 1854-1894

This DVD is the direct chronological successor to 'From Sibly to Simmonite', and focuses on texts and journals on astrology and astro-theology published in both Great Britain and the United States of America in the period from 1854 to 1894, excluding those from 1854 itself that were already covered on 'From Sibly to Simmonite', as well as some from 1894 itself that have of necessity been carried over to the next volume planned for the series.

A full bibliographical checklist of the works included on the DVD, in chronological order, follows. This order is reflected in the numerical order given to the file names. Numbered references to 'Gardner' as before.

<sup>26</sup> Most internal contents suggest 1858 though one letter printed is dated 1850; probably a slightly later compilation of a periodical published erratically by the author in a very small circulation; in fact, an advertisement at the back of Zadkiel's Almanac for 1858 indicates that it commenced publishing as a monthly on September 1st, 1857 and introduces Vaughan Williams as the 'successor to T. Oxley Esq.'

4. Godfather of Modernity: the Alan Leo Legacy Volume One - Early Astrological Journals, 1890-1912.

<sup>31</sup> Title page dated 1893; printing and copyright entry notice on reverse indicate 1894

This DVD focuses on the astrological journal issues edited or co-edited by Alan Leo in the first 22 years of his career. It includes:

All 60 issues of 'The Astrologer's Magazine' edited by Alan Leo jointly with Frederick Lacey from August 1890 to July 1895;

The first 205 issues of 'Modern Astrology' edited by Alan Leo from August 1895 to December 1912. These were issued monthly except for four Decembers when it was not published (see below);

The first two (of four published) issues of 'The Astrologer's Annual', a short-lived publication that was issued instead of 'Modern Astrology' in December 1905, 1906, 1907 and 1908 only, and has proven extraordinarily difficult to source second-hand, as a result of not having been included in the typical bound volumes of 'Modern Astrology' magazine.

Thus, in all, the DVD contains 267 of the first 269 issues of periodical publications edited or co-edited by Alan Leo. This is as much as would fit on one DVD in the high quality settings used.

It is Graves' hope that these 267 publications collectively will make for fascinating historical source material for historians of astrology, science and society, as well as for astrologers themselves. A follow-up DVD is in preparation and will contain all issues of Modern Astrology published from 1913 through to around 1938.<sup>32</sup> Beyond this, a third and final Alan Leo DVD will also be produced, containing his books and pamphlets, as well as those of his wife Bessie Leo, and others published by Modern Astrology Office.

<sup>32</sup> Work on The Alan Leo Legacy Vol. 2 is currently suspended in the hope that further material from years after 1938 will be located before going to press. If this cannot be achieved within a reasonable time-frame, and if existing customers are eager for a release without waiting for this material to surface, Astrolearn will go to production on this project including just the years from 1913-1938 inclusive plus a few odd issues after that date.
